

# Community Sanitation Assessment Note

Given by: CleanCity Collective

Date: 04 September 2024

Area: Shivaji Nagar (Ward 91),  
Hubli, Karnataka

Field volunteers conducted a sanitation assessment across multiple lanes in Shivaji Nagar following repeated complaints from residents regarding waste accumulation and poor drainage conditions. The issue appears to be persistent over the past 3-4 weeks and is gradually worsening due to irregular waste collection and clogged roadside drains.

Estimated households impacted: ~300

Population affected: ~1,200-1,500

Area coverage: ~1.2 km<sup>2</sup>

Type of locality: Dense residential

+ small commercial units

## Observations

Overflowing garbage bins in 5 identified hotspots

Open waste dumping in 2 streets

Blocked drainage causing stagnant wastewater

Foul odor reported throughout the day

Increased presence of flies and mosquitoes

Residents reported minor illnesses (fever, skin irritation)

Increased mosquito breeding observed

Potential risk of dengue/chikungunya if not addressed

Children and elderly more vulnerable

## Root Causes Identified

Irregular municipal waste collection (3-4 day gaps)

Lack of awareness on waste segregation

Improper disposal by local vendors

Drainage maintenance delays

Requested Actions

Immediate garbage clearance in hotspot zones

Drain cleaning and maintenance

Awareness drive on waste segregation

Coordination with municipal authorities

Deployment of volunteers for cleanup drives
