

Stray Dog Health Crisis & Overpopulation - Kengeri Satellite Town

NGO Name: Pawscare Bengaluru

Date of Survey: 16 November 2025

Location: Kengeri Satellite Town, Bengaluru, Karnataka

Approx Coordinates: 12.9081, 77.4856

Over the past 2 months, there has been a noticeable increase in the stray dog population in Kengeri Satellite Town. Reports from residents indicate rising cases of injured and diseased animals, along with increased human-animal conflict.

Observations

- Estimated 120-150 stray dogs across 3 main zones
- Multiple dogs observed with visible injuries (likely due to road accidents)
- 20+ cases of suspected skin infections (mange)
- Increase in aggressive behavior reported in 2 localities
- Garbage dumping areas attracting stray animals due to food waste

Affected Scope

- Area coverage: approx 2.5 km²
- High-density zones near markets and residential clusters
- Schools and pedestrian-heavy areas affected

Concerns

- Risk of disease spread among animals
- Potential risk of dog bites increasing
- Lack of sterilization leading to rapid population growth
- Injured animals not receiving medical attention

Evidence

- Photographs of injured and infected dogs
- Video documentation from 3 affected streets
- Resident complaints (written + recorded)

Recommended and requested Action

- Immediate veterinary medical camps
- Sterilization (ABC program) drives
- Vaccination campaigns (anti-rabies)
- Waste management campaign by volunteers and coordination with local authorities
