

Flood Emergency

Report ID: DRF-2026-0421

Prepared by: Rapid Response Unit, ReliefBridge India

Date of Assessment: 20 April 2026

Affected Area

Region: Aluva & nearby low-lying areas

District: Ernakulam

State: Kerala

Coordinates (approx): 10.1076, 76.3516

Following continuous heavy rainfall over the past 4 days, the Periyar River has overflowed, causing widespread flooding in Aluva and surrounding regions. Water levels rose rapidly between 19–20 April, submerging residential areas and disrupting transportation and essential services.

Households affected: ~1,200

Estimated population impacted: 5,000+

Area flooded: ~4.5 km²

Displacement: ~1,800 individuals relocated to temporary shelters

Infrastructure impact:

3 primary roads submerged

Power outages in 2 zones

Drinking water contamination reported

Observations:

Water levels ranging from 1–4 feet in residential zones

Several homes partially submerged

Limited access for emergency vehicles in inner roads

Shortage of clean drinking water in relief camps

High demand for food packets and medical supplies

Concerns:

Immediate evacuation support in 2 pockets

Emergency food distribution (ready-to-eat meals)

Clean drinking water supply

Medical aid (especially for elderly and children)

Temporary shelter management

Situation escalated within last 48 hours

Further rainfall predicted → high risk of worsening

Immediate intervention required within 24–72 hours

Immediate Actions required:

Deploy trained rescue volunteers

Coordinate with local disaster management teams

Set up additional relief camps

Ensure continuous supply of food and potable water

Initiate medical camps within 24 hours
